Khoi Tran

Senior Full-Stack Engineer | Cloud Architect | AWS Certified Solutions Architect Professional

0965611359 khoitvhe130007@gmail.com khoitv.com Hanoi, Vietnam

OBJECTIVE

Senior Software Engineer with 6+ years of experience designing and building scalable web platforms and cloud-native systems. Specialized in full-stack development using React, Next.js, Node.js, and AWS cloud infrastructure.
Experienced in system architecture design, cloud deployment, performance optimization, and engineering leadership, with a strong track record delivering production systems across fintech, e-commerce, edtech, and enterprise platforms.
AWS Certified Solutions Architect – Professional and PMP certified, with strong expertise in scalable architecture, DevOps practices, and engineering best practices.

SKILLS

Programming Languages	JavaScript, TypeScript, Python, Golang, Java
Frontend	React, Next.js, Angular, Redux, TailwindCSS, HTML5 / CSS3
Backend	Node.js, NestJS, ExpressJS, REST API, GraphQL
Database	PostgreSQL, MongoDB, MySQL, DynamoDB
Cloud & DevOps	AWS (EC2, ECS, Lambda, S3, CloudFront, RDS, IAM, Route53), Docker, CI/CD, GitLab CI, GitHub Actions, Cloud Architecture
Engineering Practices	System Design, Clean Architecture, SOLID Principles, Code Review, Agile/Scrum
AI Coding Assistant Tools	Cursor, Claude Code, Codex, Antigravity

EDUCATION

FPT University (July 2017 - July 2021)

Computer Software Engineering

CERTIFICATIONS

PMI Project Management Professional (PMP)	2029
IELTS 7.0	2026
AWS Certified Solutions Architect - Professional	2028
AWS Certified Developer - Associate	2026
AWS Certified Solutions Architect - Associate	2028

HONORS & AWARDS

Alpha of Q3-2025 - Globaldev VN (excellent individual in the third quarter of the year)	2025
Alpha of Q3-2024 - Globaldev VN (excellent individual in the third quarter of the year)	2024
The Best Developer – VTI.D1 (2023)	2023

WORK EXPERIENCE

Globaldev Group July 2024 - Present

Senior Full-Stack Engineer

Hanoi, Vietnam

VTI Corporation August 2020 - July 2024

Middle Frontend Developer

Hanoi, Vietnam

PROJECTS

KIERA — Interactive Digital Publishing Platform October 2025 - Present

Senior Frontend Developer

KIERA is a scalable content engine that transforms static educational materials into interactive digital books, enabling publishers to generate hundreds of unique titles from a single platform.

Team Size: 10.

Key Contributions:

• Designed reusable React component architecture enabling generation of 100+ interactive digital books from a shared codebase.
• Built interactive learning modules (quizzes, hotspots, mini-games) improving student engagement by ~30% during testing phases.
• Optimized rendering pipeline for media-heavy educational assets, reducing average page load time from 5.6s - 10s → under 1.2s.
• Implemented localization framework supporting 3+ languages across multiple curricula.
• Designed CI/CD pipeline and cloud deployment architecture enabling automated publishing workflows for large-scale content generation.

Tech Stack: React, Vite, NestJS, TypeScript, TailwindCSS, GCP, GCS, AWS

DOCMED — Healthcare Digital Platform January 2025 - October 2025

Senior Frontend / Full-Stack Developer

DOCMED is a healthcare ecosystem designed to support doctors with digital prescriptions, clinic supply purchasing, and professional networking services.

Team Size: 20+.

Key Contributions:

• Designed and implemented search architecture using Algolia, improving search response time from ~1.8s to under 200ms.
• Defined search indexing strategy and query optimization to support complex filtering for medical products and prescriptions.
• Managed and optimized Algolia premium plan (~$10,000/month) by refining indexing strategies and query patterns to control operational costs.
• Implemented frontend performance optimizations including lazy loading, bundle splitting, and asset optimization, reducing page load time by 55%.
• Designed maintenance mode architecture allowing the platform to gracefully enter maintenance without requiring DevOps to block IPs or perform infrastructure-level changes.
• Collaborated with backend and DevOps teams to ensure high availability and reliable deployments across production environments.

Tech Stack: Next.js, Medusa.js, Node.js, PostgreSQL, AWS, Algolia, Zustand, TanStack Query

Cask Exchange — Whisky Investment Marketplace July 2024 - Present

Senior Fullstack Developer

Cask Exchange is a digital marketplace that allows investors to buy, sell, and manage investments in premium whisky casks, providing institutional-grade infrastructure for alternative asset trading.

Team Size: 10.

Key Contributions:

• Designed full-stack architecture for a B2B/B2C investment marketplace supporting asset trading and portfolio tracking.
• Built backend services using NestJS and PostgreSQL handling thousands of investment transactions and asset records.
• Designed scalable cloud infrastructure using AWS ECS, RDS, CloudFront, and ALB, improving system reliability and availability.
• Implemented APIs enabling seamless integration between trading interfaces and backend financial services.
• Reduced API response time by 40% through query optimization and caching strategies.

Tech Stack: Next.js, NestJS, PostgreSQL, AWS (ECS, RDS, CloudFront, ALB)

iMotorbike — E-commerce Platform October 2023 - June 2024

Full-Stack Developer

A digital marketplace that connects buyers and sellers of secondhand motorcycles, enabling users to search, compare, and purchase vehicles with integrated inventory management and secure transaction workflows. Developed Next.js based e-commerce platform supporting product catalog, checkout, and user profiles.

Team Size: 20+.

Key Contributions:

• Developed scalable Next.js e-commerce platform supporting 5,000+ vehicle listings.
• Built advanced filtering and search functionality improving product discovery efficiency by 45%.
• Implemented responsive UI using TailwindCSS supporting mobile and desktop traffic with consistent performance.
• Optimized page rendering and SEO improving organic search traffic by ~30%.
• Integrated backend services for catalog management, order workflows, and user profiles.

Tech Stack: Next.js, Node.js, PostgreSQL, MedusaJS, TailwindCSS, AWS

YMA - Construction Project Management System December 2021 - July 2024

Full-Stack Developer | Frontend Team Lead

The system is about managing projects and constructions for a construction company named YMA. This system helps them control revenue, expenditure and employee's timekeeping. It is also used by their partner to synchronize data among companies to make the most precise information for every stakeholder.

Team Size: 12+.

Key Contributions:

• Led frontend team of 4 engineers delivering enterprise project management features.
• Designed reusable UI architecture using React and TypeScript, reducing development time for new features by 30%.
• Implemented CI/CD pipelines enabling automated deployments across staging and production environments.
• Managed AWS infrastructure supporting multiple partner organizations using the platform.

Techstack : React, TypeScript, Recharts, Redux, HTML, CSS, Docker, Gitlab CI/CD, Golang, NodeJS, PostgreSQL, AWS Services.

Comwork - Garbage scheduling system August 2021 - May 2022

Full-Stack Developer | Frontend Sub-Leader

Comwork - Garbage scheduling system: It is an outsource project for Japanese customers to help them run their businesses. This system helps the company's call center connect to their customers whenever they call to schedule a garbage collecting appointment. The project helps business owner have an overview of how their corporation is running with analyzed statistics and vivid information charts.

Teamsize: 12+.

Key Contributions:

• Developed scheduling and appointment management features supporting thousands of service requests per month.
• Built operational dashboards providing real-time analytics for call center management.
• Designed reusable UI components improving development productivity across the team.

Techstack: React, TypeScript, Recharts, Redux, HTML, CSS, Docker, Gitlab CI/CD, Golang, PostgreSQL, AWS Services.

VBMS - VTI Building Management System November 2020 - July 2021

Full-Stack Developer | Frontend Sub-Leader

An internal project for controlling electrical devices such as air conditioners, light bulbs, doors in a building. This system helps building management department control all the facilities in the building.

Domain: Building Management Duration: Nov 2020 - July 2021

Teamsize: 10+.

Key Contributions:

• Developed monitoring dashboards visualizing energy consumption data across multiple facilities.
• Built real-time data visualization for electricity and water usage analytics.
• Improved system usability with responsive UI and interactive charts.

Techstack: ReactJS, Recharts, Redux, Redux Thunk, HTML, CSS, Docker, Gitlab CI/CD, Golang, PostgreSQL

VFS - VTI Finance System: January 2020 - October 2020

Full-Stack Developer | Frontend Sub-Leader

VFS - VTI Finance System: It is an internal project which help finance department in VTI to import financial data into the system. After that, the application will create different reports which will be sent to high level managers in the company or public. With the data, application can easily build charts, which helps finance department save lot of time to present information for board of management.

Teamsize: 10+.

Key Contributions:

• Developed financial dashboards visualizing large datasets for executive reporting.

• Built reporting modules that reduced manual report preparation time by ~40%.

Techstack: ReactJS, Recharts, HTML, CSS Golang, MongoDB, Docker

INTERESTS

Reading book, going to the gym, running (tried marathon once), learning and taking valuable certifications.
