Khoi Tran

Senior Software Engineer | Fullstack Developer | Senior Frontend Developer

0965611359 khoitvhe130007@gmail.com khoitv.com Hanoi, Vietnam

OBJECTIVE

Software Engineer with 6+ years of experience building scalable web platforms and cloud-native systems. Experienced in designing and implementing high-performance applications using React, Next.js, Node.js, and AWS. Skilled in system architecture, full-stack development, and DevOps practices.
Proven ability to lead engineering teams, review code, and deliver production-ready systems across multiple industries including fintech, e-commerce, edtech, and infrastructure platforms.
Certified AWS Solutions Architect Professional and PMP holder with strong focus on scalability, maintainability, and engineering discipline.

EDUCATION

FPT University (July 2017 - July 2021)

Computer Software Engineering

WORK EXPERIENCE

Globaldev Group July 2024 - Present

Software Engineer / Senior Fullstack Developer

Hanoi, Vietnam

VTI Corporation August 2020 - July 2024

Middle Frontend Developer

Hanoi, Vietnam

PROJECTS

KIERA October 2025 - Present

Senior Frontend Developer

KIERA: KIERA is a high-performance content engine that transforms static educational materials into rich, interactive web-based books at scale. It functions as a digital factory,"" allowing businesses to rapidly publish hundreds of unique titles from a single codebase simply by swapping content data.
Duration: Oct 2025 - Present Teamsize: 5
Position: Senior Fullstack Developer Responsibilities:
• Component Architecture: Architect and build high-fidelity, reusable React components using Tailwind CSS to maintain a premium and consistent visual standard across all generated books.
• Interactive Implementation: Develop complex logic for interactive modules—such as chapter quizzes, mini-games, and hotspots—ensuring accurate state management for student progress and feedback.
• Performance Optimization: Optimize the viewing engine to handle media-heavy assets and animations smoothly, ensuring fast load times even when driven by large dynamic JSON manifests.
• Code Quality & Localization: Enforce rigorous type safety using TypeScript and implement robust localization features to support the seamless delivery of multi-language curricula.
• Scalability & Maintenance: Maintain build pipelines and technical documentation to ensure the "factory" model can reliably and efficiently generate hundreds of unique titles from the single template.
• Design solution architecture: choosing tech stack, set up CICD to deploy to GCP (Loadbalancing and GCP Storage) Techstack used: React Vite, Nestjs, Git, AWS S3, GCP services (Load balancing, GCP storage)

Docmed January 2025 - October 2025

Senior Frontend Developer

Docmed: POM is evolving into a one-stop digital platform to support doctors in every step of their journey. From purchasing clinic medicines and prescribing via our e-pharmacy, to connecting with fellow healthcare professionals – all in one convenient place.
Duration: Jan 2025 - Oct 2025 Teamsize: 20+
Position: Senior Fullstack Developer Responsibilities:
• Creating the visual elements users interact with using HTML, CSS, and JavaScript frameworks
• Making sure the application works flawlessly on all screen sizes—from mobile phones to desktop monitors
• Keeping the application fast and efficient by minimizing load times, optimizing images, reducing bundle sizes, and implementing best practices like lazy loading. Loading static images from few seconds to milliseconds
• Creating smooth, intuitive interactions through animations, form validations, dynamic content updates, and ensuring the interface is accessible to all users, including those with disabilities (following WCAG guidelines)
• Working closely with backend developers to integrate APIs and data flows, and partnering with designers to ensure the implementation matches the vision
Techstack used: Medusa.js, Nextjs, Zustand, Tanstack Query, NodeJS, ExpressJS, PostgreSQL, AWS, Algolia

Cask Exchange July 2024 - February 2025

Senior Fullstack Developer

CaskX: Cask Exchange is a sophisticated digital marketplace designed for whisky cask trading and investment. Built as a comprehensive B2B and B2C platform, it enables users to buy, sell, and manage investments in premium whisky casks with institutional-grade security, analytics, and market infrastructure.
Domain: Beverage Investment Duration: July 2024 - Feb 2025
Teamsize: 10
Position: Senior Fullstack Developer
Responsibilities:
• Create responsive, functional front-end experiences using HTML, CSS, and JavaScript frameworks Develop Server Logic
• Write backend code to handle business logic, data processing, and application workflows Manage Databases
• Design database schemas, write queries, and ensure efficient data storage and retrieval Connect Frontend to Backend
• Implement APIs and integrate them so the UI communicates seamlessly with the server Deploy & Maintain
• Push code to production, monitor performance, fix bugs, and keep the application running smoothly
Techstack used: Nextjs, Nestjs, PostgresDB, AWS services: RDS, EC2, ECS, Cloudfront, ALB, Route 53, ACM

iMotorbike October 2023 - June 2024

Middle Frontend Developer

iMotorbike: E-commerce Platform for Motorcycle Accessories and Tools. Developed a feature-rich e-commerce platform focused on the buying and selling of motorcycle accessories and tools.
Domain: E-commerce & Inventory Duration: Oct 2023 - June 2024
Teamsize: 10+ Position: Fullstack Developer
Responsibilities:
• Build a responsive frontend using NextJS, ensuring a user-friendly interface and experience
• Style the application with Tailwind CSS, implementing a modern and sleek design
• Implement product filtering features, allowing users to narrow down product searches
• Develop dynamic searching functionality, providing users with instant results
• Design and integrate a secure checkout system, ensuring smooth transactions for users • Create personalized product recommendations, enhancing the user experience with customized content
• Develop user profiles, enabling users to manage their orders, track purchases, and maintain account information
• Ensure a seamless shopping experience with optimized performance across desktop and mobile platforms
• Utilize NextJS for improved performance and SEO benefits
Techstack used: NodeJS, MedusaJS, NextJS, PostgreSQL, Tailwind CSS, AWS

YMA - Construction Project Management System December 2021 - December 2022

Middle Frontend Developer - Team Frontend Leader

YMA - Construction Project Management System: It is an outsource project for Japanese customers. The system is about managing projects and constructions for a construction company named YMA. This system helps them control revenue, expenditure and employee's timekeeping.

It is also used by their partner to synchronize data among companies to make the most precise information for every stakeholder.
Domain: Construction Management Duration: Dec 2021 - Dec 2022
Teamsize: 12+ Position: Leader of FE team
Responsibilities:
• Participate in designing and building UIs based on figma
• Suggest best practices to solve technical problems when creating source base for the project
• Review and merge team members' PRs
• Guide freshers when they first join the project
• Manage AWS Infrastructure
• Deploy BE and FE source code on staging and production environments
Techstack used: React, TypeScript, Recharts, Redux, HTML, CSS, Docker, Gitlab CI/CD, Golang, NodeJS, PostgreSQL, AWS Services (S3, Cloudfont, Route 53, ECS, ECR, EC2, SES...)

Comwork - Garbage scheduling system August 2021 - May 2022

Middle Frontend Developer - Team Frontend Leader

Comwork - Garbage scheduling system: It is an outsource project for Japanese customers to help them run their businesses. This system helps the company's call center connect to their customers whenever they call to schedule a garbage collecting appointment. The project helps business owner have an overview of how their corporation is running with analyzed statistics and vivid information charts.
Domain: Waste Management Duration: Aug 2021 - May 2022
Teamsize: 12+ Position: Sub Leader of FE team
Responsibilities:
• Participate in designing and building UIs based on figma
• Suggest best practices to solve technical problems when creating source base for the project
• Review and merge team members' PRs
• Guiding freshers when they first join the project Techstack used: React, TypeScript, Recharts, Redux, HTML, CSS, Docker, Gitlab CI/CD, Golang, PostgreSQL, AWS Services (S3, Cloudfont, Route 53, ECS, ECR, EC2, SES...)

VBMS - VTI Building Management System November 2020 - July 2021

Middle Frontend Developer - Team Frontend Leader

VBMS - VTI Building Management System: It is an internal project for controlling electrical devices such as air conditioners, light bulbs, doors in a building. This system helps building management department control all the facilities in the building. In addition, this project can calculate the expenditure of electricity and water in order to suggest solutions to prevent wasting resources.
Domain: Building Management Duration: Nov 2020 - July 2021 Teamsize: 10+ Position: Sub Leader of FE team Responsibilities:
• Participate in designing and building UIs based on figma
• Suggest best practices to solve technical problems when creating source base for the project
• Review and merge team members' PRs
• Guiding freshers when they first join the project
Techstack used: ReactJS, Recharts, Redux, Redux Thunk, HTML, CSS, Docker, Gitlab CI/CD, Golang, PostgreSQL

VFS - VTI Finance System: January 2020 - October 2020

Middle Frontend Developer

VFS - VTI Finance System: It is an internal project which help finance department in VTI to import financial data into the system. After that, the application will create different reports which will be sent to high level managers in the company or public. With the data, application can easily build charts, which helps finance department save lot of time to present information for board of management.
Domain: Fintech Duration: Jan 2020 - Oct 2020 Teamsize: 10+ Position: Frontend Developer Responsibilities:
• Participate in designing and building UIs based on figma
• Support BE team to create APIs
Techstack used: ReactJS, Recharts, HTML, CSS Golang, MongoDB, Docker

CERTIFICATIONS

PMI Project Management Professional (PMP) 2029

IELTS 7.0 2026

AWS Certified Solutions Architect - Professional	2028
AWS Certified Developer - Associate	2026
AWS Certified Solutions Architect - Associate	2028

HONORS & AWARDS

Alpha of Q3-2025 - Globaldev VN (excellent individual in the third quarter of the year)	2025
Alpha of Q3-2024 - Globaldev VN (excellent individual in the third quarter of the year)	2024
The Best Developer – VTI.D1 (2023)	2023

SKILLS

Programming Languages	JavaScript, TypeScript, Python, Golang, Java
Frontend	React, Next.js, Angular, Redux, TailwindCSS, HTML5 / CSS3
Backend	Node.js, NestJS, ExpressJS, REST API, GraphQL
Database	PostgreSQL, MongoDB, MySQL
Cloud & DevOps	AWS (EC2, ECS, S3, CloudFront, RDS, Route53), Docker, CI/CD, Gitlab CI, Cloud Architecture
Engineering Practices	System Design, Clean Architecture, SOLID Principles, Code Review, Agile / Scrum
AI Coding Assistant Tools	Cursor, Claude Code, Codex, Antigravity
